

Managed Endpoint Detection & Response (EDR)

Premier cyber security solutions provide a comprehensive approach to protecting endpoints, networks, and other information technology infrastructure with both proactive and reactive assessment and mitigation. This comprehensive approach requires the best blend of both advanced Endpoint Detection & Response (EDR) software and cyber security engineer policy management and monitoring.

Proprietary technology, artificial intelligence, and endpoint security vulnerability assessments provide in-depth protection against modern cyber threats. Software protocols and industry best practices are monitored against endpoint running processes to provide greater mitigation strategies for software flaws, insecure protocols, and improperly written software. Magoo's EDR solution provides these necessary features to secure your endpoints and business infrastructure from modern threats.

Our Managed Endpoint Detection & Response (EDR) solution provides a completely monitored and managed endpoint security ecosystem to ensure protection against modern threats. Get complete insight and control of your information systems with, comprehensive proactive and reactive management by our Cyber Security Specialists (CSS) at Magoo & Associates.

Endpoint Detection & Response Features

RISK ANALYTICS AND HARDENING							
PREVENTION							
DETECTION AND RESPONSE							
REPORTING AND MANAGEMENT
